

Plastic surgery Face/Neck lifting

Description:

Together with aging there are symptoms visible on the face and neck as well. The skin weakens and the facial sub-dermal structure gets looser. We can compare this effect to the face sliding downwards.

Technologies:

There are two methods that can be used – Gentle «Face-lifting» – by the APTOS thread and classical Face/Neck lifting technology.

The APTOS «Face-lifting»

This involves a very gentle technique which uses special strings with counter-hooks to stretch the aging skin and flattens the wrinkles. The procedure is done under local anesthesia and it is possible to be used also with younger patients under 30. With the help of this technique it is possible to solve falling of the face contours, eyebrows, mouth ends and surroundings. The effect is immediate and healing is completed within one week. The result of this treatment lasts up to 5 years and is it possible to be repeated if desired.

The surgeons were taught directly by the founder of this technique, Prof. Sulamanidz. The advantages compared to the classical face-lifting are: the operation is very gentle and without scars. No total anesthesia is needed and the recuperation time is very short.

Face/Neck lifting

The method can reverse the aging of the skin. It is a surgical operation where from surgical cuts situated just in front of the ear lobe or in suitable cases in the front corner of the ear lobe loosens the face and neck skin from the under-layer attachment of the face. This under-layer is then lifted and firmed by a special technique. The loosen skin is stretched and finely sewed in the above mentioned cuts.

For the following two weeks the patient wears a special face bandage. During that period the post-surgery swelling and bruises absorb.

If the problem is not only the atonic skin but also wrinkles your doctor usually combines the treatment with laser peeling which flattens wrinkles in the face areas which cannot be reached by the lifting (like the areas around mouth and chin, the lower eye lid lamellas).

For the combined treatment there is hospitalization necessary for about 4-5 days in order to secure full comfort of the patient connected with the face treatment and to avoid possible complications.

LASTING EFFECT:

At least 5 years

ANESTHESIA:

Local (for APTOS) / General (for Face/Neck lifting)

STAY DURATION:

7 days (for APTOS) /21 days (for Face/Neck lifting)
