

Aesthetic surgery Minor wrinkles removal

Description:

Wrinkles is a nightmare of almost every woman. Quite often young women want to remove the first indications of aging of the skin and keep the face look younger and fresher. The new technologies offer an effective and quick help.

Technologies:

The treatment is done by a specially developed unique combination of three modern non-surgical treatment technologies: N-lite, Photofacial, and Diamond Peeling.

N-lite: The treatment is done by a special laser beam. It stimulates the cells in the skin to be able to produce its own collagen. Collagen functions as elastic filler and that is how flexibility is again regained as well as firmness and a youngish look.

Photofacial: Simply said – cleaning the complexion by pulses of intensive light. The light pulse smashes the pigment spots and the pigment is then extracted to the surface in the form of little scales which are peeled off the same way as an old skin.

DiamantPeel: It is a process in which upper layers of the skin are mechanically removed by a peeling machine with gentle diamond extenders. This modern method is more intensive than classical peeling methods but not so intensive to cause any damage of the treated area. DiamondPeel method helps to quicken face cleansing and its regeneration, remove corneous skin (elbow and knee areas), facilitates vitamins and pharmaceuticals penetration and whitens uneven skin pigmentation.

LASTING EFFECT:

At least 3 years

ANESTHESIA:

Not needed

STAY DURATION:

7 days
